AKDT: A New Approach to Economic Development

The Alaska Development Team (AKDT)

Mission

To promote growth of existing Alaskan businesses, encourage new businesses to invest in Alaska, and help create an economic environment that is favorable for business development.

Vision

To enable a flourishing private sector economy that brings job opportunities to the state and increases prosperity and self-sufficiency for Alaskan families.

Fundamental Question

What can Alaska do today, with what we have in our regions and communities, to grow and attract commerce, industry, and investment?

What Does the AKDT Do?

We work with Alaskan businesses, governmental entities, economic development organizations, industry groups, and chambers of commerce to identify and facilitate ways to make doing business in Alaska easier.

How are we doing this?

- Promoting the advantages of doing business in Alaska to prospective investors
- Serving as a facilitator to connect interested parties and move investment ready commercial and industrial projects forward
- Interacting with economic development organizations, industry groups, and business owners and participating in trade events to share information and ideas for promoting business growth
- Identifying barriers to business development in Alaska and developing approaches to resolve impediments

Economic Engines

“What drives the Alaska economy?”

2008 Scott Goldsmith article is still relevant today

UA Research Summary No. 13 • December 2008
Institute of Social and Economic Research • University of Alaska Anchorage

WHAT DRIVES THE ALASKA ECONOMY?

By Scott Goldsmith

What drives Alaska's economy is new money: money coming in from outside the state. How big the economy is, and how much it grows, depends on how much new money comes in.

New money comes from “basic” sectors—the sectors that are the basis for all jobs and income across Alaska. They are, in effect, the gears driving the economy.

Alaska has eight main basic sectors, but the number of Alaskans they employ directly is small, compared with the number of jobs they support indirectly. Figure 1 shows numbers and shares of jobs for Alaskans that the federal government, the petroleum sector, and the other basic sectors generated on average between 2004 and 2006. The numbers for any specific period aren't as important as the percentages, which don't change much from year to year.

• If the flow of federal and petroleum money disappeared overnight, two-thirds of the jobs for Alaskans would also disappear, because each of them supports a third of those jobs.

• Alaska's other basic sectors combined support about a third of jobs for Alaskans. The seafood, mining, and timber sectors produce commodities that are exported. The tourism and international air cargo sectors sell services to people from outside Alaska. Federal retirement checks and investment income Alaskans collect from outside sources also generate jobs.

How is it that the federal government and the petroleum sector support most jobs for residents, and several other sectors support the rest? This summary, based on a longer paper (see back page), is a unique analysis of how the basic sectors drive the economy. Instead of looking just at jobs in a specific activity—seafood processing, for instance—we allocate all the jobs throughout the economy to the basic sectors that support them. This method gives a clearer picture of the structure of the economy, but it may produce different numbers than other methods.

Here we use jobs for residents to measure economic contributions—a reasonable measure but not the only one, as we discuss in the full paper.

We analyze just jobs for Alaska residents, even though many non-residents also work here. They don't typically spend their paychecks in Alaska, so they don't add as much to the economy.

To compare across sectors, we've converted all jobs to an annual average number. That means for industries like commercial fishing and tourism, which have a lot of seasonal jobs, we've translated the larger number of seasonal jobs into a smaller number of year-round jobs. Still, keep in mind that not all jobs are equal; some pay much more than others.

WHY DOES ALASKA'S ECONOMY LOOK LIKE THIS?

Before we talk more about how the basic sectors generate jobs, it's useful to look at the big picture. Why does the federal government play such a big role in Alaska, and why are most basic sectors ones that produce natural resources? Why don't we have, say, more in-state manufacturing or large high-tech businesses?

Federal spending in Alaska is high, relative to the population, for several reasons—including a large military presence; huge federal land holdings; federal health-care and other programs for Alaska Natives; and continuing construction of basic infrastructure that the federal government helps pay for.

Alaska's economy has also historically been shaped by characteristics that increase the costs of doing business and make development difficult—including huge size, harsh climate, and distance from markets and suppliers. Economic growth and technological advances have reduced but not eliminated such disadvantages, especially in remote areas.

WHY IS NEW MONEY IMPORTANT?

Why is it important for new money to come into the state? That's because

no economy—in Alaska or anywhere—is self-sufficient. All economies have to buy goods and services that aren't produced locally, which means money flows out of the local economy to economies somewhere else. That loss has to be offset by new money flowing in, or the local economy would eventually go broke.

Figure 1. What Generates Jobs for Alaska Residents?²
(Annual Average Number of Jobs for Residents, 2004-2006: 357,000)

^aExcludes jobs held by non-residents. ^bSeafood, tourism, mining, timber, international air cargo, and personal services from outside Alaska (primarily federal retirement benefits).

Note: This analysis shows that the petroleum sector reaches across Alaska's economy, supporting jobs in almost every industry. But petroleum's effects go even deeper, as a follow-up ISER study will show. Without the support and stability petroleum has provided since the 1960s, Alaska's economy might be only half the size it is today. Look for the new study in early 2009.

How Can AKDT Help Alaska's Economy?

By focusing on Alaska's economic engines and potential growth sectors, we drive the Alaskan economy.

Highlights of Recent AKDT Activities

AKDT and Mining

- **Making it easier to do business**
- **Alaska mining, U.S. Critical Minerals, and eligibility for “high priority infrastructure project” designation to streamline permitting**

AKDT and Mariculture

- **Interacting with industry to promote business growth**
- **Alaska Mariculture Task Force, Alaskan grown shellfish & seaweed, overcoming statutory and regulatory hurdles, and consultation with the seafood industry**

AKDT and Broadband

- **Identifying barriers and resolving impediments**
- **Alaska broadband, sensible standards for satellite performance, and OneWeb collaboration with Pacific Dataport to improve rural connectivity**

Other AKDT Initiatives

- Expanding gaming opportunities in Alaska
- Attracting investors for cold storage and secure storage facilities for international air cargo
- Pursuing initial funding to extend broadband fiber connectivity from Kodiak to Dutch Harbor
- Assisting Alaska Aerospace Corporation to attract commercial rocket launches and to market their skills and techniques around the world
- Capitalizing on University of Alaska research and development capabilities
- Providing long-term supplies of timber to global markets
- Exploring potential for multi-user infrastructure funded primarily by and for industry (similar to Delong Mountain Transportation System)
- Pursuing public-private partnerships for tourism opportunities
- Ongoing work with Alaska Regional Development Organizations (ARDORs), Alaska Municipal League members, industry groups, and chambers of commerce on driving local and regional economic engines

Graphite One Inc.

Core from drilling through a graphite-rich lens at Graphite Creek. This world-class deposit, which could provide a domestic source for the graphite needed for the lithium-ion batteries used to store wind- and solar-generated electricity, is among the Alaska mining projects that could benefit from more efficient permitting under Fast-41.

now be considered for more efficient permitting under Title 41 of the Fixing America's Surface Transportation Act, or Fast-41, a program established in 2015 to improve the timeliness, predictability, and transparency of the federal environmental review and authorization process for eligible infrastructure projects.

This Obama-era Fast-41 program established the Federal Permitting Improvement Steering Council (FPISC), a federal entity meant to provide a one-stop-shop capable of coordinating permits across different federal agencies, thereby streamlining and shortening the overall process for some large projects.

On Jan. 15, FPISC voted in favor of including mining among the sectors eligible for the coordination and permit streamlining under Fast-41.

Getting mining included as an eligible sector under Fast-41 was prompted by Alaska Gov. Michael Dunleavy, who nominated Graphite One Inc.'s Graphite Creek deposit in western Alaska as a high-priority infrastructure project

OneWeb Collaborates with PDI, Aims to Improve Arctic Connectivity

OneWeb, a global communications company, has lately made an announcement about a new distributor partnership with Pacific communication system: services all over Alaska.

On this occasion, Presid been an amazing experi areas of the Arctic regio PDI recognized the abili in varied markets."

This partnership will allow the delivery of OneWeb's high speed internet services all over Alaska. *Chuck Schumann, CEO, Pacific Dataport, Inc.*

Customers to Enjoy OneWeb Services as Early as Q4 2020

This agreement ensures that the customers in the Arctic region will have the benefit of OneWeb connectivity as early as Q4 2020. The unique qualities of Alaska suggest that it is a hub for economic growth and the seamless global communication system of OneWeb will be a key booster for regional initiatives, including growth of a digital economy and collection of climate data.

CEO at PDI, Chuck Schumann, said, "PDI is pleased to sign the agreement with OneWeb, which will be Alaska's important LEO service agreement. PDI is a frontrunner in the satellite industry, continuously planning and implementing modern technologies existing in the market for the customers. We are happy to team up with OneWeb, who will offer high-speed connectivity to serve our customers in Alaska and the Arctic."

PDI to Display OneWeb's Service across Arctic

Schumann further added saying that PDI has the benefit of being one of the firsts to get the opportunity to display OneWeb's service in Alaska and eventually in the Arctic region from the year's end. Also, the enthusiasm from their customers to test and try-out the services of OneWeb has been important.
